

# MAKE GALLON MAN

to practice liquid measurement equivalents

You'll need 5 sheets of construction paper, each one a different color. One will be for his head (or *her* head), one will be kept whole and labeled "gallon". The next sheet will be folded into fourths, cut, and labeled "quart". Then, fold another sheet into eighths, cut, and label "pint". Finally, fold the last sheet into sixteenths, cut, and label "cup".

1 gallon = 4 quarts

1 quart = 2 pints

1 pint = 2 cups
